

CHLOE ORIOTIS

Engineer & Technical Storyteller

chloe.orientis@gmail.com | +1 416-879-2218

Mechanical engineer exploring the relationship between technology and storytelling. I believe technical products deserve stories as well-engineered as the products themselves. Narratives should be clear, credible, and built for users and stakeholders. I'm drawn to roles at the intersection of engineering depth and narrative craft: where demos convert skeptics, talk tracks open doors, and the gap between a complex product and the person who needs it most finally closes.

WORK EXPERIENCE

Technical Field Sales Engineer and Solutions Consultant, Quanser 2025-Present

- Built a **\$1.8M pipeline from cold** within five months through targeted account research, outreach campaigns, and **50% travel** to grow client relationships
- Owned all accounts and established presence at universities across **nine US states** through technical demos and consultations with **100+ faculty** including researchers, deans, and department chairs; communicating value through narrative
- Delivered live presentations to convert skeptical academic audiences into long-term strategic partners by translating highly specific research requirements into product capabilities
- Advocating for forward-thinking changes to engineering education in terms that resonate with both engineers and institutional decision-makers

Sales Manager and R&D Mechatronics Engineer, ReDeTec Inc. 2022-2024

- Developed ReDeTec's data-driven sales strategy, leading to the highest sales month on record and matching the previous year's sales by Q3
- Conducted mechanical research and development for ReDeTec's flagship product, ProtoCycler: a 3D printing plastic extruder/recycler machine

Business Strategist and Product Engineer, Inertia Product Development 2021-2022

- Managed project accounts, led clients by creating and presenting weekly reports on design developments, and managed stakeholder relations by aligning different groups
- Created a low-cost ventilator from the ground-up; developed mechanical designs, performed risk analyses and wrote quality documentation for future FDA approval

EDUCATION Bachelor of Applied Science and Engineering

- University of Toronto, Department of Mechanical Engineering
- Specialization in Bioengineering and Mechatronics, with Communication Certificate
- Achieved fourth-year Honours and received President's Entrance Scholarship

ACHIEVEMENTS Valedictorian, University of Toronto Engineering 2021

- Voted-in representative of 1500 graduating engineering students

John Weber Award for Mechanical Engineering, University of Toronto 2021

- Designed a scholarship-winning medical drone, awarded best mechanical design of fourth-year students

TOOLS & PLATFORMS	• AI Tools: ChatGPT, Claude, Copilot • Microsoft Dynamics 365 CRM, Suite • Google Suite • Slack, Trello • Coding: Python, HTML, CSS, MATLAB • Autodesk Fusion	SPECIAL INTERESTS	Lifelong Learning
			• Greek/French fluency • AI as a workflow companion
COMMS & STRATEGY	• Technical storytelling • Writing, videography • Consultative/persuasive presentations • Account strategy/stakeholder management/client relations • Product/Project management, growth strategy, innovation		Performance and Written Arts
			• Cast in U of T's sketch comedy musical, <i>Skule Nite</i> • <i>Second City</i> improv alum • <i>Boskone</i> international short story competition finalist • Novel-in-progress!
			Cycling
			• Bikepacking
